Personal Details

- Date of Birth : 24/12/1995
- Marital Status : Single
- Gender : Male
- Military service : Finished
- Current position : Senior R&D and Quality Control Chemist

Objective

Versatile Chemist works with different types of chemicals, compounds, and materials. Proficient in performing tests, documenting results, and writing papers. Well-organized and detail-oriented with good project management and planning abilities. Goal-oriented Employee offering strong knowledge in chemical compositions and standard testing procedures. Keeps laboratory equipment and instruments in optimal condition. Proactive in ordering supplies, completing inventories, and maintaining records.

Education

- **Mansoura university , 2019 graduate.**
Bachelor's of Science , major chemistry.
Graduation project : Biosynthesis of Esters.

Skills

- Profound experience in the most popular microbiology tests.
- Batch record analysis.
- Excellent english with excellent verbal, writing and communication skills.
- ICDL and Microsoft office package (Work- Excel- Power point).
- SAP documentation and release awareness.
- Water basic analysis (PH, Conductivity, Total Hardness, TDS, Sulfide, Oxygen demand).
- Safe and effective handling with kjeldahl, UV, GC, HPLC, flame photometer, digestion devices.

Awareness And Self-Learning Courses

- ISO 9001
- ISO 14001
- ISO 45001
- TQM

Training

- February 2020: Responsible for performing food analysis and tests during military service.
- March 2016: trainee water treatment chemist.
- March 2014: Trainee mud engineer.

Work Experience

- **Production section head at Cimex misr for disinfectants, detergents and air fresheners.** 1/4/2023 - Present

- 1- Monitoring plant operations for signs of chemical exposures or other hazards to workers' health.
- 2- Conducting experiments to test new processes or products in order to evaluate their performance characteristics.
- 3- Conducting chemical analyses of new products to ensure that they meet safety standards.
- 4- Reviewing safety procedures and equipment to make sure they are adequate for the task at hand.
- 5- Conducting research in a laboratory setting to develop new products or processes.
- 6- Reviewing data and conducting tests to identify potential chemical hazards in the workplace.
- 7- Reviewing production schedules to ensure that they are achievable based on previous production rates.
- 8-Developing new production methods or improving existing ones to increase efficiency or quality of product.

• **Lab and quality control chemist at Ferchem misr for chemicals and fertilizers.** Oct 2020 - March 2023

- 1- Monitoring plant operations for signs of chemical exposures or other hazards to workers' health.
- 2- Conducting experiments to test new processes or products in order to evaluate their performance characteristics.
- 3- Conducting chemical analyses of new products to ensure that they meet safety standards.
- 4- Reviewing safety procedures and equipment to make sure they are adequate for the task at hand.
- 5- Conducting research in a laboratory setting to develop new products or processes.
- 6- Reviewing data and conducting tests to identify potential chemical hazards in the workplace.
- 7- Reviewing production schedules to ensure that they are achievable based on previous production rates.
- 8-Developing new production methods or improving existing ones to increase efficiency or quality of product.

Languages

- Arabic : Mother tongue.
- English : 4,5 out of 5 proficiency.

Interests

- Bibliophilic and MMA player
