- Investigating/recording incidents, accidents, complaints and cases of ill health
- Writing reports, bulletins and newsletters
- Undertaking risk assessments
- Identifying potential hazards
- Determining ways of reducing risks
- Liaising with relevant authorities

- Manager at (KRB) Karbala refinery project with AL-Bilal group company (2020- 2021/09/1).

Main Duties.

Developing Safety Management Policies.

- evaluate the workplace environment and develop safety-management policies that identify and define the safety responsibilities of all employees. This involves assessing the nature of business activities, number of employees and existing policies.
- beverage manufacturer, for instance, develops a policy that requires workers to report situations that present a risk and which they can't properly deal with on their own. A good safety management policy provides for adequate medical treatment and compensation for workplace injuries.

Coordinating Training Programs.

- To continually maintain an appropriate level of awareness, knowledge and preparedness across the organization, HSE managers coordinate training programs for employees. A HSE manager working in a construction company, for example, has a duty to educate workers about site-specific safety measures. For instance, if the company is building a radio tower, the HSE manager might train workers to deal with potential hazards, such as accidental exposure to high amounts of radio frequency energy and electrical faults.

Investigating Workplace Incidents.

- Although charged with enhancing workplace safety, some incidents might not be detected during risk assessments. For example, if a company installs a faulty air conditioner in the office, an unanticipated electrical fault can occur. An HSE manager investigates such incidents, establishes the causes and recommends preventive action against a recurrence. HSE managers also ensure that workplace tools and equipment meet industry standards and installed properly, as defined by the Occupational Safety and Health Administration. HSE managers in the mining industry need to ensure their companies comply with the Mine Safety and Health Act of 1977, which protects the safety and health of workers, and is enforced by the Mine Safety and Health Administration

Preparing Reports.

- prepares monthly reports and makes presentations to senior administrators. A typical HSE report indicates day-to-day workplace inspection results and workers' response to safety incidents. For example, if you work as an HSE manager for a health facility, your report might include disposal of waste materials, maintenance of medical equipment and response of new health care staff to HSE policies. HSE reports can be analyzed to detect weaknesses in the safety management program.

-HSE Manager AT (KRB) Karbala refinery project With (HDGSK JV) (2021-09-01-Till Now).

Main Duties.

- Develop and execute health and safety plans in the workplace according to legal guidelines
- Prepare and enforce policies to establish a culture of health and safety
- Evaluate practices, procedures and facilities to assess risk and adherence to the law
- Conduct training and presentations for health and safety matters and accident prevention
- Monitor compliance to policies and laws by inspecting employees and operations
- Inspect equipment and machinery to observe possible unsafe conditions
- Investigate accidents or incidents to discover causes and handle worker's compensation claims
- Recommend solutions to issues, improvement opportunities or new prevention measures
- Report on health and safety awareness, issues and statistics.
- Establish and ensure implementation of the HSE Management System on all phases (Engineering, Procurement, Construction, Commissioning up to Completion) of the project.
- Establish Project HSE Plan including HSE Policy (based on Interno QHSE Policy) and continually improve it.
- Ensure a site free from COVID-19, by following, and implementing all the necessary regulations and precautions.
- Report the Project HSE Audit Results to the Project Manager.
- Plan for and implement the site HSE & security training programs.
- On regular schedule, take a site safety and security patrol to find any inappropriate practice. Inform assigned superintendent to take a necessary measure to correct discrepancies and assure that corrective action is followed up.
- Responsible for ensuring that Project HSE Management policy, plans and procedures are implemented effectively and are suitable for their purposes and use for which they are intended.
