- Safety

Projects:

- **Graduation project**

- The Effect of Electric Trains**

- Using Egypt Railways as a Case Study to Describe the Role and the improvement of Electric Trains instead of Heat Engine Trains.**

- It Considered a new axis that aims to connect the Red and Mediterranean Seas, serving the ambitious state plan for developing Egyptian ports specially SOKHNA Port in Red Sea. It is planned to be a global logistics trade zone linked to the largest ports of the Republic on the Mediterranean Sea in Alexandria. This will contribute to making Alexandria a leader in the field of transportation. And the effect of electric trains on the environment.

- **Using the descriptive approach provides a valuable foundation for understanding the problems facing the train maintenance system and for developing solutions to these problems.**
 - **The Analytical Approach was used to Study the Problem of the Existing Railway System. We Implemented Electric Trains and Used Previous Studies from Other Countries to Assess the Feasibility of The Electric Train Project.**
- **The Development of the Silk Road and its Impact on Countries.**
